(54) Title: CYLINDRICAL APPLICATOR FOR DISPENSING COSMETIC COMPOSITIONS

(57) Abstract: Cylindrical applicator for dispensing cosmetic compositions in the form of liquid, cream,, gel or other, onto the human skin. The invention comprises an applicator in the form of a cylinder (1) of rigid material, encased by pressure inside a seat (2) of resilient material, said seat consists of two semicircular guides (3), joined by two support circles (4), and two inferior braces (5) that define the distribution opening (6), being said cylinder (1) free to roll. The present invention is the main part of the head section of various packages. Said cylinder (1) is coated by the cosmetic product when the container is turned upside-down, and rolled against the skin, applying the product uniformly. When pressed down by internal elements of the cap, the cylinder (1) seal the distribution opening (6). With a larger area of application, the present invention is used to apply a large number of cosmetic products to extensive areas, like the face or the body.
